What this page demonstrates

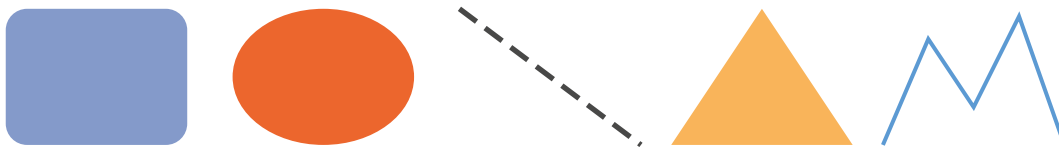

Every visible element on this page was emitted by a single MCP tool call running through the interactive bridge. Shapes, text, colors, charts and layout primitives are all composed live from Claude. Read on to page 2 for the lower-level primitive showcase.

Backend	Latency	Persistent	GUI	Best for
Headless	~3 s/call	no	none	CI batch
Bridge (Qt)	~50 ms/call	yes	responsive	Live editing
Bridge (no Qt)	~50 ms/call	yes	frozen	headless persistent

primitive + pattern showcase

MARKDOWN IMPORT

Markdown imported

A short paragraph from a markdown source. Includes regular text and **emphasis-marked** content, plus a list:

- imported in one tool call
- styled by the markdown parser
- replaces dozens of primitive calls

BARCODE / QR

caewa/scribus-mcp

FIND / REPLACE

find/replace works content

SYNTAX-HIGHLIGHTED CODE SAMPLE

example.py

```
1 | from scribus_mcp import build_server
2 | import asyncio
3 |
4 | async def main():
5 |     mcp = build_server()
6 |     out = await mcp.call_tool(
7 |         'create_code_sample',
8 |         {'code': source, 'language': 'python'})
9 |     return out
```

PREFLIGHT — 0 issues

preflight reports no issues. The page validates: no missing fonts, no overflowing frames, all images resolved.
